· Protection of hands:

Protective gloves.

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

• *Material of gloves Nitrile rubber, NBR*

Butyl rubber, BR

Recommended thickness of the material: ≥ 0.10 mm mm

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

· Penetration time of glove material

The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.

- · As protection from splashes gloves made of the following materials are suitable: PVC gloves
- \cdot Not suitable are gloves made of the following materials:
- Strong gloves Leather gloves

• Eye protection:

Safety glasses recommended during refilling.

Not required.
